-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito (WO 02/43975). It is initially noted that US 7,017,633 will be referenced as it constitutes the English equivalent of WO '975.

As best depicted in Figure 4, Saito is directed to a tire including an inner tube, wherein said inner tube includes a composite reinforcement formed of a single layer in the sidewall region and a composite reinforcement formed of a plurality of layers in the crown region. The reference further provides a stress-strain relationship for the composite reinforcement in Figure 2. In this instance, the stress-strain relationship is the same for the composite reinforcement in the sidewall region and the crown region. Looking at Example 2, the stress-strain curve is defined by an initial segment that is upward sloping and smoothly increasing up to an elongation of 5 % and a second segment that has a "generally flat" curvature. As to the sidewall region, the initial segment is seen to satisfy the claimed limitation as the claim does not require the entirety of the stress-strain curve to be "an upward sloping shape smoothly increasing".

Regarding claim 2, the composite reinforcement of Saito can be a polymer sheet or a fibrous member.

As to claims 3 and 4, Saito discloses each of the claimed reinforcing materials (Column 5, Lines 30+ and Column 9, Lines 45+).

With respect to claim 5, Figure 5 depicts the composite reinforcement as being radially outward of the air bag.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Justin R. Fischer** whose telephone number is **(571) 272-1215**. The examiner can normally be reached on M-F (7:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on (571) 272-1226. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
